Hiring Manager
Emirates Group IT
Dubai, United Arab Emirates

Dear Hiring Manager,

I'm excited to apply for the Technical Manager - Cloud Infrastructure Engineering role at Emirates Group.

PETRONAS is Malaysia's national oil and gas company, and at PETRONAS Digital, I've been responsible for over 6 years in shaping cloud architecture, infrastructure and solutions. Currently I am a manager in Cloud Strategy, leading a team of automation engineers focused on infrastructure orchestration and delivery - defining KPIs, managing performance, and ensuring alignment with departmental objectives.

My experience aligns closely with what Emirates Group is looking for:

- **Cloud innovation & AI enablement:** Designed AWS Innovation Sandbox for PETRONAS Agentic AI adoption program, working with Enterprise Architecture team to define policy security guardrails and cost management controls for the sandbox environment
- **AWS & Azure at enterprise scale:** 6 years of solid experience across both platforms, architecting and deploying landing zones for over 800 applications serving PETRONAS group-wide business operations across multiple subsidiaries and regions, establishing multi-account governance, networking, security guardrails, and identity integration
- **Infrastructure as Code & automation:** Delivered end-to-end IaC pipelines using Terraform with reusable modules, centralized tagging validation, CI/CD integration, and automated provisioning workflows
- **Cloud migration & hybrid environments:** Technical Lead for AWS Malaysia Repatriation project for data sovereignty compliance, and migrated 20 applications to AWS within 50 days under Cloud Transformation Program with zero unplanned downtime
- **Cost governance & observability:** Built centralized billing inventory platforms, tag compliance enforcement, and reporting dashboards using KQL and Power BI
- **Team leadership & vendor management:** Managed cross-functional project delivery, coordinated with vendors, and led teams through the Cloud Self-Service Portal and SkyLedger tagging platform initiatives
- **VMware & private cloud:** Hands-on experience with VMware vSphere and vCenter environments from my Unix engineering background

What motivates me most is solving complex technical problems in a way that creates real business value. I enjoy working across teams, translating technical needs into clear solutions, and building systems that can grow with the organization. I'm confident that with my experience and exposure in cloud strategy, engineering, architecture, leadership, and management would enable me to contribute meaningfully to Emirates Group.

The opportunity to join a world-class aviation company and contribute to its cloud operations is one I find deeply compelling. I'd welcome the opportunity to bring that experience and mindset to your team.

Thank you for your time and consideration, and I look forward to the chance to speak with you.

Sincerely,
Faiz Mazlan
